

Safetrip Finance
a modern financial umbrella

LIGHTPAPER

ABOUT SAFETRIP FINANCE?

Safetrip Finance is a community token that helps to create a unified financial umbrella that allows it's users to access all financial instruments at once, chopping off the time and impractical fee's.

Our upcoming utilities planned, will be easy to use, allowing you to forego banks and multiple brokerages for various instruments in favour of Safetrip Finance, which will put everything under one big financial umbrella & platform.

OUR MISSION.

In pursuit of our mission and vision, we think that all traders and investors should be provided access to a stronger financial framework, regardless of their status as a “product” for the financial institutions.

SafeTrip wants to put the complete financial sector under one umbrella regardless of the financial and technological obstacles, by unifying access to all financial products and by eliminating the middlemen. Due to being an independent platform, SafeTrip provides customers with a simple and streamlined way to deal with all their funds,

OUR VISION.

If we could find a way to bring all financial instruments under one umbrella, the entire structure would be far more efficient and there would be no transaction fees. Also, it gives people the option to keep their identity intact and it would give them total control over their money. With the use of SafeTrip Finance, money flow, savings, and spending will be altered, as this financial platform offers a 100% transparent, easy, and useful framework that is entirely self-sustainable. By providing our interoperability with current and previous Fiat currencies, as well as using the newest Blockchain technology, we can guarantee SafeTrip Finance's success!

We envision a version of STF which covers the whole financial industry modern and traditional, dex and cex. Therefore we spotted a gap in the Defi industry which we are currently working on and already released our first product, <https://app.safetrip.finance>. Which we compared to moving to a new country with Different culture Language! Etc.

At first, it feels cold and dark, Now the new Country is the DEFI Industry, which is dark and cold for 90% of the new holders, why is it cold and dark? Due to the nature of the market itself, which is based on the fact that there's no intermediary and the trader or investor doesn't trust a 3rd party with their tokens, all a trader can do is to connect his/her wallet to Pancake Swap then swap whatever tokens are available on the exchange, however with Defi gaining popularity among the community this market witnessed a rapid increase in the

liquidity recording a record high of 10 billion U.S dollars. Even with the presence of bears, two of the biggest DEX'S (Pancake Swap and Uniswap), 24H Trading Volume is still above a billion for each of the exchanges, which brings us to the fact that every day there are 1000s of tokens getting listed on both of the exchanges, to be more precise both networks, Eth and BSC. Now since those tokens are newly listed there is not that much information's available, so traders and investors have to use a 3rd party to access the smart contract's, financial data, trades history, locked liquidity and tokens etc.

STF aims to bring lightness to the DEFI'S darkness through an analytics hub which acts as the base of data for all smart contracts (tokens) built on BSC , Eth & Matic networks in a user-friendly way, STF envisions a reality where DEFI surfing is simple, from charts, financial data, transactions, token aka smart contract analysis to execution, plus way more upcoming features and integrations.

There were plenty of problems but very few solutions.

It's clear that our Founder and team are eager to trade. They have learned to trade GOLD, which is considered one of the most complicated trading instruments in the world. When looking across the board, the entire team found numerous issues in the existing framework that had to be resolved in order to provide a more rational and accessible investment/trading opportunity for the public, rather than a money-printing machine for the brokers and financial institutions that treat customers as a "product" that is sold. To go ahead of the competition, the team chose to pioneer a bold step in combining the fragmented market framework. The future possibilities of this are difficult to predict, but it is safe to say that it will transform how we define "Finance."

Not rational Brokerage fees that a financial institution levies on behalf of customers while utilizing their own money. This doesn't make sense, does it? When you wish to withdraw your capital from the trading account, you'll be charged a fee. You want to aid your buddy, so you pay a charge to move money from one account to another. When you deposit money in your trading account, you must pay another charge. Your money is pretty much all gone regardless of what you do with it, since there are plenty of middlemen taking a cut of every transaction. Even after you've paid the charge, you still need to put in "time" to really understand how bad things might go.

It is important to provide access to all of the financial instruments that are relevant for an understanding of the work. For various financial products, the service providers retain the right to limit the supply in order to make a little more money.

With existing financial sector regulation, institutions and brokers have disproportionate influence over people's finances, indirectly because the inefficiency of the system encourages them to take advantage of people. There is a chance that the existing structure may seem to be steady since it has not yet been varied in terms of current user requirements.

The SafeTrip Solution Overview.

Our answer is simple yet complicated; we want to provide a trading platform that will offer you access to all financial instruments, including cryptocurrency, stock derivatives, spot trading, CFDs, metals, indices, and energies!

Our emphasis is on finding ways to end the many issues we described before. These are our many transparent solutions organized into three groups.

1. Increasing the number of different payment options and formats
2. Integration of the trading platform with the rest of the framework
3. Bridging the gap between the financial services and their dependencies.

We have planned to implement a single payment solution, which will power our new financial and business services products. We hope to leverage this to spur wider adoption, as well as for increasing user acquisition. This method helps create a feedback loop that strengthens itself: making it easier for people to utilize the many payment channels that spurs them to come to our platform while bringing in both commercial and financial services, which means that more money can be reinvested in the payments. We have developed three vertically integrated product solutions that provide a stable environment that furthers our purpose.

TOKENOMICS.

The basic tokenomics of Safetrip Finance is that the price of STF is paired to BUSD, bringing stability and avoiding BNB volatility in our token price.

STF is set up for long-term success for both our holders and future development/marketing. All transactions contribute to our Locked liquidity engine, helping prevent volatility as this pool grows, allowing users to buy and sell, whilst ensuring best transaction costs.

OUR UTILITY ROADMAP.

Safetrip Finance has a long and ambitious roadmap ahead. Part of this roadmap is bringing a vast array of utility to Safetrip Finance and it's tokenholders.

Defi Hub

A decentralised hub, where you can connect your portfolio, explore, exchange & stake your cryptocurrencies with ease.

Staking

You can earn rewards when you stake cryptocurrencies and fiat for a period of time as an incentive to acquire and hold onto staking assets.

Blockchain Explorer

STF's blockchain explorer incorporates a multitude of different blockchains including BSC, Matic & Ethereum into one search engine

Debit Card

Shop with crypto at leading retailers around the world, whilst earning rewards & cash back for each and every transaction*.

Exchange

Utilising STF's Exchange that we built for newcomers and experts on our Defi Hub, you can to buy, sell, and trade crypto in a matter of seconds.

Portfolio

You can earn rewards when you stake cryptocurrencies and fiat for a period of time as an incentive to acquire and hold onto staking assets.

Hot Farms

Browse through various Hot Farms to earn rewards on your assets.

Initial Digital Offerings

Be the first to browse & invest in new startup DEFI projects.

NFT Marketplace

Discover, collect, and sell extraordinary NFTs

Automated Audits

Auditing tool to make DEX trading safer from malicious contracts, exit scams ('rug pulls'), and hacks
